

Tryptic Project Idea #1

Picture 1

Picture 2

Picture 3

Create flow from the first op let image through the middle second picture finally to the third picture in the bottom right. Use three pictures of a space in a panoramic view but not all horizontal but two vertical pictures and one horizontal picture moving from the sky to the ground through the middle. Possibly editing the photos to provide a more sketched appearance to work better with the laser. Some effect of filters to provide more lines in the photos so that they will come out better with the laser.
